Approved by the decision
of the MIPT Academic Council
dated June 29, 2023
(protocol No. 01/06/2023)

**Federal State Autonomous Educational Institution of Higher Education "Moscow
Institute of Physics and Technology
(National Research University)"**

**THE MAIN EDUCATIONAL PROGRAM
OF HIGHER EDUCATION**

**Level of higher education
BACHELOR**

**Domain of study
19.03.01 BIOTECHNOLOGY**

**Orientation (specialty)
BIOMEDICAL ENGINEERING/БИОМЕДИЦИНСКАЯ ИНЖЕНЕРИЯ**

**Starting year of the educational program
2023 y.**

Update of the educational program:

decision of MIPT Academic Council dated May 30, 2024 (protocol No. 01/05/2024)

decision of MIPT Academic Council dated April 24, 2025 (protocol No. 01/04/2025)

The main educational program of higher education in the field domain of study 19.03.01 Biotechnology, orientation (specialty) Biomedical Engineering/Биомедицинская инженерия, implemented at MIPT, is a set of basic characteristics of education (volume, content, planned results), organizational and pedagogical conditions, forms of certification, which is presented as a general characteristic of the educational program, curriculum, academic calendar schedule, work programs of disciplines (modules), training programs, evaluation and methodological materials. The main educational program of higher education has been created on the basis of the educational standard domain of study 19.03.01 Biotechnology, independently developed and approved by MIPT.

1. General characteristics of the educational program

Qualifications awarded to graduate: bachelor.

Form of education: full-time

Education period: 4 years.

The educational program consists of 240 credits and includes all types of student's classroom and independent work, training, time, allotted for quality control of the mastering of the educational program by the student.

The contact work of students with teachers consists of, at least, 4 532 hours.

Program implementation language: english.

Using a network form of educational program implementation: no.

Program goal:

This program is intended for students studying in the "Biotechnology" major in English. The program aims to provide students with the necessary knowledge in the field of Life sciences, as well as specialized knowledge in the fields of chemistry, biology, genetics, bioinformatics and biophysics. During the learning process, students choose the most interesting specialization for them for further in-depth study: bioinformatics, biophysics, molecular biology, genetics, etc. The goal of the program is to give the most complete picture of these areas for further specialization of students, as well as to provide the possibility of in-depth study of selected specialties.

2. Characteristics of the professional activity of graduates:

Fields of professional activity and areas of professional activity,

in which graduates, who have mastered the bachelor's program, can carry out professional activities:

40 Cross-cutting types of professional activities in industry (in the field of fundamental and applied research, innovation and development, as well as in the development and implementation of new technological processes for the production of advanced materials (including composites, nano- and metamaterials), opto-, - micro- and nanoelectronics, development and application of electronic devices and complexes, as well as in the field of monitoring the parameters of materials, the state of complex technical and living systems and the state of the environment, including the development and use to solve assigned problems).

Graduates can carry out professional activities in other fields of professional activity and (or) areas of professional activity, provided that their level of education and acquired competencies meet the requirements of the employee's qualification.

Types of tasks of professional activity of graduates:

research.

Tasks of professional activity of graduates:

conducting scientific and analytical research on separate sections (stages, tasks) of the project within one's own subject area in accordance with approved plans and research methods;

participation in conducting observations and measurements, performing experiments and processing data using modern computer technologies;

collection and processing of scientific and analytical information using modern programs, tools and methods of computational mathematics, computer and information technologies;

participation in conducting theoretical research, building physics, mathematical and computer models of the processes and phenomena under study, in conducting analytical research in one's own subject area;

participation in the consolidation of the obtained data, conclusions formation, in the preparation of scientific and analytical reports, publications and presentations of the results of scientific and analytical research;

participation in the creation of new methods (genetic, cellular, biotechnological), technical means, algorithms and computer programs for research and applied purposes.

Objects of professional activity of graduates, mastered the program Bachelor's:

models, methods and means of fundamental and applied research and development in the field of mathematics, physics, biology, chemistry and other natural and socio-economic sciences in the profiles of subject activities in science, engineering, technology, as well as in the areas of high-tech production, management and business;

objects of engineering, technology and production.

3. List of professional standard, corresponding to the professional activities of graduates:

40.011 Research and Development Specialist.

Code and name of the professional standard	Generalized labor functions			Labor functions		
	code	name	level of qualification	name	code	level of qualification
40.011 Professional standard "Research and Development Specialist"	A	Conducting R&D work on individual sections of the topic	5	Implementation of work on the processing and analysis of scientific and technical information and research results	A/01.5	5
				Implementation of experiments and registration of R&D work results	A/02.5	5

4. Requirements for the results of mastering the educational program

As a result of mastering the main educational program, the graduate should form universal, general professional and professional competencies.

Universal competencies of graduates and indicators of their achievement:

Code and name of competence	Code and name of the indicator of competence achievement
UC-1 Search and identify, critically assess, and synthesize information, apply a systematic approach to problem-solving	UC-1.1 Analyze problems, highlight the stages of their solution, plan the actions required to solve them UC-1.2 Find, critically assess, and select information required for the task in hand UC-1.3 Consider various options for solving a problem, assess the advantages and disadvantages of each option UC-1.4 Make competent judgments and estimates supported by logic and reasoning UC-1.5 Identify and evaluate practical consequences of possible solutions to a problem
UC-2 Determine the range of tasks for the set goal and choose the best way(s) to solve them, based on current legal regulations, available resources, and constraints	UC-2.1 Determine a set of interrelated tasks required to achieve the current objective, define the expected results of these tasks UC-2.2 Work out a solution to a specific task within a project, selecting the best way(s) to solve it, based on current legal regulations, available resources, and constraints
UC-3 Interact effectively with project team members and fulfill one's role properly	UC-3.1 Establish different types of communication (educational, scientific, business, informal, etc.) UC-3.2 Interact with other team members to fulfill the project objectives
UC-4 Conduct business communication in oral and written form in Russian and a foreign language	UC-4.1 Demonstrate the ability to exchange business information in oral and written form in Russian and at least one foreign language UC-4.2 Use modern information and communication tools to communicate
UC-5 Reflect on the cultural diversity of society from social-historical, ethical, and philosophical perspectives	UC-5.1 Demonstrate the knowledge of the basics of philosophy, history, the foundations of intercultural communication UC-5.2 Understand ethical and intellectual norms and values, their role in the history of society
UC-6 Use time-management skills, apply principles of self-development and lifelong learning	UC-6.1 Determine professional priorities and ways to improve professional performance through self-assessment UC-6.2 Plan independent activities in professional problem-solving; critically analyze the work performed; find creative ways to use relevant experience for self-development

UC-7 Maintain an adequate level of physical fitness to undertake social and professional activities	UC-7.1 Learn the basics of healthy living, health saving technologies, physical education UC-7.2 Understand the impact of physical education on health promotion and prevention of occupational diseases UC-7.3 Maintain one's physical fitness level; demonstrate general and professionally oriented physical agility; make various individual fitness plans
UC-8 Establish and maintain a safe living environment, including in the event of emergencies	UC-8.1 Learn the classification and causes of natural and human-made disasters; causes, signs, and consequences of hazards, safety procedures in case of emergency UC-8.2 Maintain a safe living environment; identify the signs, causes, and conditions of emergencies; assess the likelihood of potential hazards, and take measures to prevent them UC-8.3 Forecast dangerous or emergency situations and necessary safety measures in case of emergency
UC-9 Ability to make informed economic decisions in various areas of activity	UC-9.1 Understands the basic principles of the functioning of the economy and economic development. UC-9.2 Knows the main types and sources of economic and financial risks and how to reduce them. UC-9.3 Knows the basics of economic analysis for making informed economic decisions.
UC-10 Able to form an intolerant attitude towards manifestations of extremism, terrorism, corrupt behavior and counteract them in professional activity	UC-10.1 Understands the nature of the occurrence and danger of extremism, terrorism, corruption, the need to actively counter extremism, terrorism and corruption and the importance of forming a personal position in relation to extremism, terrorism and corrupt behavior UC-10.2 Knows the causes that generate extremism, terrorism and corruption, the possible forms of their manifestation, the principles (legal, administrative, organizational, etc.) of countering extremism, terrorism and corruption, the formation and implementation of policies to counter extremism, terrorism and corruption, as well as the basics of anti-corruption actions in various areas of life UC-10.3 Knows how to analyze the causes and prerequisites for the occurrence, the nature of manifestation and consequences of corrupt actions and is able to contribute to the implementation of the policy of countering extremism, terrorism, corruption and form a personal position on the main issues of a civil and ethical nature, demonstrating an intolerant attitude towards extremism, terrorism and corrupt behavior

General professional competencies of graduates and indicators of their achievement:

Code and name of competence	Code and name of the indicator of competence achievement
Gen.Pro.C-1 Apply knowledge of mathematical, physical, chemical, biological laws, patterns, and interrelation to study, analyze, and utilize biological objects and processes	Gen.Pro.C-1.1 Analyze the task in hand, outline the ways to complete it Gen.Pro.C-1.2 Build mathematical models, make quantitative measurements and estimates Gen.Pro.C-1.3 Determine the applicability limits of the obtained results
Gen.Pro.C-2 Use modern IT and software tools to perform professional tasks in compliance with information security requirements	Gen.Pro.C-2.1 Apply modern computing tools and Internet services in professional settings Gen.Pro.C-2.2 Apply numerical mathematical methods and use software applications for scientific problem-solving in professional settings Gen.Pro.C-2.3 Fulfill basic information security requirements

Gen.Pro.C-3 Write scientific and/or technical (technological, innovative) reports (publications, projects)	<p>Gen.Pro.C-3.1 Adopt the general criteria for submission of manuscripts, scientific and technical documentation, using relevant software applications</p> <p>Gen.Pro.C-3.2 Employ practical methodologies for preparing scientific and technical reports (projects)</p> <p>Gen.Pro.C-3.3 Visually and graphically present scientific (scientific and technical, innovative technological) outcomes in the form of reports, scientific publications</p>
Gen.Pro.C-4 Collect and process scientific and technical and/or technological data for fundamental and applied problem-solving	<p>Gen.Pro.C-4.1 Apply scientific research and intellectual analysis methods for professional problem-solving</p> <p>Gen.Pro.C-4.2 Search for primary sources of scientific and technical and/or technological information in professional settings</p> <p>Gen.Pro.C-4.3 Prepare abstracts, reports, bibliographies, and reviews of information in professional settings</p> <p>Gen.Pro.C-4.4 Use computer and network skills to obtain, store, and process scientific (technical, technological) information</p>
Gen.Pro.C-5 Participate in fundamental and applied research and development activities; independently develop new theoretical research methods (including mathematical research methods)	<p>Gen.Pro.C-5.1 Perform tasks in the field of theoretical and experimental research and development activities</p> <p>Gen.Pro.C-5.2 Apply new knowledge through the study of literature, scientific articles, and other sources</p>
Gen.Pro.C-6 Operate technological equipment, manage biotechnological processes, design technical and technological systems, technical facilities, biotechnological production processes by applying basic engineering and technological knowledge	<p>Gen.Pro.C-6.1 Professionally operate modern experimental scientific research (measuring and analytical, technological) equipment in biotechnological research</p> <p>Gen.Pro.C-6.2 Evaluate, analyze, and interpret biotechnological data</p> <p>Gen.Pro.C-6.3 Possession of the skills to design new technological solutions for the scientific, technical, biotechnological task at hand</p>

Professional competencies of graduates and indicators of their achievement:

Code and name of competence	Code and name of the indicator of competence achievement	Basis (professional standards, analysis of other requirements for graduates)
type of professional activity tasks: research		

Pro.C-1 Plan and conduct scientific experiments (in a selected subject area) and/or theoretical (analytical and simulation) research	<p>Pro.C-1.1 Understand the fundamental concepts, laws, and theories of modern physics and biology</p> <p>Pro.C-1.10 Apply knowledge of leading scientific journals to select relevant publications in professional settings</p> <p>Pro.C-1.11 Conducts experimental research with cells and cell cultures, conduct physical and chemical study of macromolecules, analyze and study life systems, apply mathematical methods to process biological research outcomes, understand and apply the basic concepts of bioengineering</p> <p>Pro.C-1.2 Gain in-depth knowledge and understanding of mathematical disciplines</p> <p>Pro.C-1.3 Proficiency in methods of observation, description, identification and scientific classification of biological objects</p> <p>Pro.C-1.4 Set scientific objectives and build models of biotechnological objects and systems</p> <p>Pro.C-1.5 Build mathematical models used to describe and research various processes and phenomena in relevant scientific fields</p> <p>Pro.C-1.6 Safely use modern scientific tools and other experimental equipment</p> <p>Pro.C-1.7 Follow the basic rules of conduct in a modern scientific laboratory</p> <p>Pro.C-1.8 Estimate the time and resources required to conduct a scientific experiment</p> <p>Pro.C-1.9 Use modern programming languages and software packages for scientific calculations</p>	Research and development specialist
Pro.C-2 Analyze research data and make scientific conclusions	<p>Pro.C-2.1 Adopt methods of statistical process and scientific data analysis</p> <p>Pro.C-2.2 Define key parameters of the studied phenomenon and make relevant numerical estimates</p> <p>Pro.C-2.3 Make scientific claims with supporting evidence for a professional audience in verbal and written form, state scientific problems and propose solutions</p>	Research and development specialist
Pro.C-3 Select the necessary devices, tools, and research methods for problem-solving in a selected subject area	<p>Pro.C-3.1 Apply functional principles and operating ranges of scientific equipment</p> <p>Pro.C-3.2 Apply theory to evaluate the accuracy of analytical calculations</p> <p>Pro.C-3.3 Estimate the accuracy of numerical methods used on a computer, learn the computational complexity of the applied algorithms and the number of required computing resources</p>	Research and development specialist
Pro.C-4 Critically assess the applicability of applied methods and techniques	<p>Pro.C-4.1 Apply the numerical order of values in respective professional settings</p> <p>Pro.C-4.2 Understand the causes of measurement errors and inaccuracies, estimate them, verify the validity of experimental results</p> <p>Pro.C-4.3 Provide evidence to support the cause-effect relationship of applied concepts and models</p>	Research and development specialist

5. Curriculum

The curriculum (Appendix 1) determines the list, labor input, sequence and distribution by periods of study of academic disciplines (modules), trainings, other types of educational activities, forms of intermediate and final certification of students. The labor input of the educational program is set in credit units.

The volume of compulsory part, excluding the volume of the state final attestation, is 47,5 percents percent of the total volume of the program.

The matrix of compliance of competencies with the disciplines of the curriculum is given in Appendix 2.

6. Academic calendar schedule

Academic calendar schedule (Appendix 3) shows the distribution of types of educational activities, periods of attestation of students and vacations by year of study (courses) and within each academic year. The academic calendar schedule of the educational program of higher education includes 192 3/6 weeks, of which there are 117 weeks of theoretical and practical training, 37 4/6 weeks of the credit-examination period, 1 3/6 weeks of the state final certification and 36 2/6 weeks of holidays.

7. Work programs of disciplines (modules)

Work programs of disciplines (modules), including evaluation materials for ongoing monitoring of progress and intermediate certification, are presented in Appendix 4.

8. Practice programs

The educational program provides for the following trainings:

Research Practice/Научно-исследовательская практика (Учебная): academic practice;

Project Session/Проектная сессия: academic practice;

Laboratory Safety and Biological Workshop/Лабораторная безопасность и биологический практикум: academic practice;

Personal Research Project/Научно-исследовательская работа: practical training.

Work programs of trainings, including assessment materials for ongoing monitoring of progress and intermediate certification are presented in Appendix 5.

9. Program of the state final certification

As part of the state final certification, the following are provided:

Performance of and Defence of Graduation Thesis/Выполнение и защита выпускной квалификационной работы.

The program of the state final certification (Appendix 6) includes requirements for final qualifying works (volume, structure, design, presentation), the procedure for their implementation, the procedure for defending the final qualifying work, criteria for evaluating the results.

10. Material and technical, educational and methodological support of the educational program

Work programs of disciplinary (modules), practical definitions of material, technical, educational and methodological support, educational programs, including a list of licensed and freely distributed software, a list of electronic scientific publications and (or) printed publications, electronic educational resources, a list and composition of modern professional bases data and information reference systems.

Educational materials for conducting training sessions, built-in educational programs equipped with equipment and technical means of training, the composition of which is defined in work programs, disciplines (modules) and practices.

Premises for independent work of students equipped with computer devices with an Internet connection and provide access to the electronic information and educational environment of MIPT.

The MIPT electronic information and educational environment provides access to:

– to ELS:

ELS "University Library Online";

“Book on Lime” publishing house “University Book House”;

ELS publishing house "Lan";

ELS publishing house "Urayt";

ELS publishing house "IBooks.ru";

ELS Books.mipt.ru;

ELS ZNANIUM.COM.

– to foreign and commercial journals and electronic databases:

Bentham Science Publishers journals;

journals Wiley Journal Database;

World Scientific Publishing Co Pte Ltd. journals;

electronic version of the journal “Achievements of physical sciences” Autonomous non-profit organization

Editorial Board of the journal “Achievements of physical sciences”;

electronic version of the journal “Chemistry achievements” Institute of Organic Chemistry named after. N. D. Zelinsky;

Journals of the V. A. Steklov Mathematical Institute of the Russian Academy of Sciences: Mathematical journals (mathnet.ru): Proceedings of the Russian Academy of Sciences. Mathematical series, Mathematical collection, Advances in mathematical sciences;

electronic version of the journal “Quantum Electronics” P.N. Lebedev Physical Institute of Russian Academy of Sciences;

Russian magazines on the East View platform of IVIS;

Cambridge Crystallographic Data Center database;

Orbit Premium edition Questel SAS database;

database Academic reference Chinese academic journals (CD edition) Electronic Publishing House Co., Ltd.;

database Cochrane Library John Wiley & Sons, Inc.

Classrooms for conducting training sessions provided for by the educational program are equipped with equipment and technical teaching aids, the composition of which is determined in the work programs of disciplines (modules) and practices.

The premises for independent work of students are equipped with computer devices with the ability to connect to the Internet and are provided with access to the electronic information and educational environment of MIPT.

11.Features of the educational program implementation for the disabled and persons with special needs

If there are persons with disabilities or persons with special needs among students, the educational program is adapted taking into account the special educational needs of such students.

When teaching according to an individual curriculum for people with disabilities, the period for mastering the educational program can be extended at their request by no more than one year compared to the period for obtaining education for the corresponding form of education.

12. Staff conditions for the implementation of the educational program

The teaching staff who provide training in the core disciplines of the educational program are highly qualified specialists in the field of biomedical engineering.

The share of scientific and pedagogical staff (in teaching loads reduced to integer values) with an education corresponding to the profile of the discipline (module) being taught, in the total number of scientific and pedagogical staff implementing the Bachelor's program is more than 70 percents.

The share of scientific and pedagogical staff (in teaching loads reduced to integer values) who have an academic degree (including an academic degree awarded abroad and recognized in the Russian Federation) and (or) an academic title (including an academic title obtained abroad and recognized in the Russian Federation), in the total number of scientific and pedagogical staff implementing the Bachelor's program, is more than 60 percents.

The share of scientific and pedagogical staff (in teaching loads reduced to integer values) from the number of managers and employees whose activities are related to the orientation (specialty) of the ongoing Bachelor's program (having work experience in this professional field for more than 3 years) in the total number of employees implementing the master's program is more than 5 percents.

13. Information about the departments involved in the implementation of the educational program

Center for educational programs in bioinformatics: head of the Center - Golenkova Anna Nikolaevna, analyst. The Center for Educational Programs has incorporated a combination of various programs and areas, teachers have various competencies, disciplines are taught by practicing specialists in various fields, and student enrollment increases every year. Students learn to process and analyze large volumes of information about biological objects, both currently available and that which will become available in the near future, taking into account the trend towards exponential growth of this data. They will also study how molecular diagnostic methods are developed and new drug targets are selected.
